

SARTHAK KUMAR

Full Stack Developer

Delhi / Mumbai | 7738319254 | krsarthak.17@gmail.com | GitHub | LinkedIn

SUMMARY

Full-stack developer who loves solving hard problems — from scalable backend systems to clean, responsive UIs. Skilled across React, Node.js, Go, and AWS, with a track record of shipping measurable performance and revenue gains.

SKILLS

Next.js, Go, React, Node.js, Python, AWS Lambda, PostgreSQL, MongoDB, Express.js, Tailwind CSS, Postman, AWS EC2, React Native, AWS Amplify, PM2, AI/ML Integration, DSA, RESTful APIs, JavaScript, C/C++, 3rd-Party APIs, UI/UX, DevOps

PROFESSIONAL EXPERIENCE

Software Developer

Frayto Logistics

Jun 2025

Andheri, Mumbai

- Designed a real-time Kanban job board (Socket.IO) for vendor-shipper matching, cutting selection delay by 60%.
- Refactored the multi-step add-shipment flow into one unified table view, cutting task time by 30%.
- Integrated FraytoLens, a cross-dashboard chatbot resolving vendor/shipper queries and cutting process delays by 40%.
- Engineered a premium flow with subscription reminders and feature gating, lifting net revenue by 6%.

Software Developer

Embifi

Apr 2024 - May 2025

New Delhi

- Implemented live agent and e-rickshaw tracking via Google Maps, improving real-time monitoring and route efficiency.
- Enhanced the workflow with a second co-customer feature, updated backend/frontend logic, and integrated CRIF.
- Improved the NACH presentation process, increasing presentation efficiency by 43% through API optimizations.
- Developed an API using Mixpanel to track agents on the dashboard, providing real-time tracking insights.
- Implemented load balancers on EC2 servers, improving performance and enabling automatic load shifting.
- Built a route-optimization API that boosted collection and sales agent efficiency by 180% on the ground.

Flutter Developer Intern

SportiLabs

Jan 2024 - Apr 2024

Remote

- Developed and implemented OAuth for user authentication, ensuring secure, seamless user verification and login.
- Built a responsive Flutter UI with Redux for state management, developing the frontend in Dart and Android Studio.
- Deployed the application end-to-end on AWS (EC2 backend, Amplify frontend) with 0% server downtime.

PROJECTS

Loan Management Software — Website + Native App

- Client Interface (MERN): a Loan Management System tracking applications across stages, with NBFC integration.
- Used Textract and Google Vision via AWS Lambda for PAN/Aadhaar verification, automating identity checks.
- Built Lambda functions for identity verification and CRIF score retrieval, with custom error handling.
- Designed a pendency tracker for pending tasks and documents, speeding loan completion by roughly 45%.
- Agent App (React Native): agents create loan applications from Android, with OCR for Aadhaar verification.
- Built a Google Maps endpoint tracking agent location and distance traveled, lifting on-ground efficiency by 45%.

Cab Admin Dashboard

- Built a MERN dashboard calculating time, distance, and halt time for cab drivers, with graph and pie-chart analysis.
- Integrated Leaflet for live driver location, enhancing real-time monitoring and analysis of fleet activity.
- Used Recharts to surface Month-on-Month and Day-on-Day performance insights for individual and multiple drivers.

Fleet Rental App

- Built a fleet rental app in React Native (TSX), delivering a seamless mobile UI for vehicle rental services.
- Developed the backend in Go with a KYC module, automating document verification through third-party APIs.
- Integrated plan selection across vehicles and models, and added Easebuzz for secure, streamlined payments.
